K2 4.5 Update KB001420 New Features List

New Feature	Description	K2 blackpearl	K2 blackpoint	Prerequisite
K2 Designers				
K2 SmartActions	K2 SmartActions enables end users to action task list items without the need for a user form, provided there are no required fields that need to be filled to action the worklist item. K2 SmartActions is a messaging based method of actioning worklist items, using Microsoft Exchange Server. Alternative methods of messaging may be added, however additional integration based development may be required.	✔	✔	Microsoft Exchange Server 2007, or Microsoft Exchange Server 2010 NB: EWS Support required
SQL and CRM SharePoint SmartObject Export and Import	Manage your K2 SharePoint SmartObjects better. The K2 SQL / CRM Import and Export SmartObjects feature enables the user to export SmartObjects in the highly portable and compact XML format. The SmartObject definition can then be moved to any SharePoint Environment which has identical dependencies. The SmartObject definition is imported by SharePoint Central Administration and retains the original GUID for easy identification. Processes which used these SmartObjects in their previous environment retain the use of the SmartObject as it persists with the same identity. Manual configuration via configuration enables the end user to adapt the SmartObjects to the target environments.	✔	✔	See note *
* Complies with K2 SQL Server prerequisites
