K2 smartforms 1.0.4 (4.12165.1595.0)

New Features	
New Feature	**Description**
Calendar Control Picker	Previously the Calendar Control only allowed for the selection of a date. This control has now been enhanced to allow for the selection of a date, date and time or just time depending on the requirement. For more information refer to the following documentation: - *K2 smartforms > K2 Designer > Views > Creating Views > Layout > Toolbox > Controls > Calendar*
Navigate to URL Rule Action Enhancement	The Modal Dialog Window has been added as an option when using the Navigate to URL Rule action. At runtime the target URL will open in a child window, the window must be actioned, for example closed, before you can interact with the View or Form again. For more information refer to the following documentation: - *K2 smartforms > K2 Designer > Understanding Rules > Actions > Navigate to URL or another Form*
Rule Search	Search functionality has been added to enable searching of rules in both the View and Form designers. For more information refer to the following documentation: - *K2 smartforms > K2 Designer > Understanding Rules*

Enhancements	
Feature	**Description**
Fixed SmartObject Bindings	If a property is deleted from a SmartObject, the control bound to that property will now be unbound when editing the View where previously the View would return an error due to the property no longer existing.
Control Bindings	The ability to either bind or unbind a field to a specific control has been added, where previously it was impossible to bind a standalone control to a field or change a field bound to a specific control. An ellipsis next to the control's Field property allows you to configure the binding. For more information refer to the following documentation: *K2 smartforms > K2 Designer > Views > Creating Views > Layout > Item View Layout*
View Designer Enhancement	To improve the integrity of a View the settings and attributes of the View have been separated from the actual creation of the View. This allows you to define the settings before the View is created. The Details and Settings screens have been replaced by the General screen. The Layout screen now provides the functionality to either Generate a View or Insert a blank Table and there are toolbar buttons allowing you to regenerate the View when needed. The benefit of this improvement is that when changes are made to a View such as changing the data source settings inline the View will not break. For more information refer to the following documentation: - *K2 smartforms > K2 Designer > Views > Creating Views > View Designer – General* - *K2 smartforms > K2 Designer > Views > Creating Views > Layout*

K2 smartforms 1.0.4 (4.12165.1595.0)

Enhancements	
Feature	**Description**
Improved Show a Message Rule Action	The Title, Heading, and Body fields of the *Show a message* Rule Action have been changed from required to optional fields, and a new "None" type has been added to the Message Type options giving you the ability to configure the message to meet your business requirements. For more information refer to the following documentation: *K2 smartforms > K2 Designer > Understanding Rules > SmartForms- Rule Designer – Actions*
List View Filter and Quick Search	The Quick Search fields on a List View used to allow the user to filter the list on columns that did not appear on the List. The Quick Search has now been fixed allowing the user to only see and use the visible columns in the list to filter on. For example, at design time in an Employee List View a column titled "Date of Birth" was marked as not visible. At runtime the List View would not display the Date of Birth column, however the user could see the Date of Birth column in the filter configuration and would be able to configure the filter to return data specified around the Date of Birth column. This is no longer possible as the Date of Birth column would not be available in the filter criteria. For more information refer to the following documentation: *K2 smartforms > K2 Designer > Views > Creating Views > Layout > List View Layout*

Software Support		
Feature	**Description**	**Prerequisite**
Microsoft .NET Framework support	K2 SmartForms 1.0.4 now only uses Microsoft .NET Framework 4.5. Both the Runtime and Design time sites have been changed to run on .NET Framework 4.5.	Microsoft .NET Framework 4.5 installed on the K2 smartforms Web servers
Browser version support	The following browser versions are supported in K2 smartforms 1.0.4: - Internet Explorer 8 (Runtime Only) - Internet Explorer 9 - Internet Explorer 10 - Chrome 29.0.1547.66 m - Firefox 23.0.1 - Safari 5.1.7	Any one of the following: Internet Explorer 8 Internet Explorer 9 Internet Explorer 10 Chrome 29.0.1547.62 m Firefox 23.0.1 Safari 5.1.7
